

# Stay Safe Online – Prevention Checklist

## General Safety Tips:

- Create strong and unique passwords for every account by using a mix of letters, numbers, and special symbols.
- Turn on two-factor authentication (2FA) for important accounts such as email, social media, and banking applications.
- Do not click on suspicious or unknown links received through SMS, email, or messaging apps like WhatsApp.
- Always verify the identity of unknown callers, especially those claiming to be from banks or customer support services.
- Keep your mobile phone and applications updated regularly to reduce the risk of security vulnerabilities.

## UPI / Financial Safety Tips:

- Never disclose your UPI PIN or OTP to anyone, even if they claim to be bank officials or customer care representatives.
- Carefully review payment requests before approving them, as entering your UPI PIN means money is being sent.
- Avoid scanning unfamiliar QR codes shared by strangers or posted on unknown online platforms.
